

## CLAIMS

1. A valve, coupling or like fluid handling part for use in piping and fluid control devices which is composed of a plurality of components, the plurality of components including  
5 a specified metal member having a surface exposed on an exterior of the fluid handling part, the fluid handling part being characterized in that the metal member is made of an alloy comprising, in % by weight, 0.001 to 0.01% of C, up to 5% of Si, up to 2% of Mn, up to 0.03% of P, up to 100 ppm of S, up  
10 to 50 ppm of O, 18 to 25% of Cr, 15 to 25% of Ni, 4.5 to 7.0% of Mo, 0.5 to 3.0% of Cu, 0.1 to 0.3% of N, and the balance substantially Fe and other inevitable impurities.

2. A fluid handling part according to claim 1 which is a valve comprising a body, an actuator, a diaphragm and bolts  
15 for fastening these components together, each of the bolts being the specified metal member.

3. A fluid handling part according to claim 1 which is a pipe coupling to be assembled by tightening up a cap nut as screwed on an externally threaded portion provided on an outer  
20 periphery of a tubular coupling member, the cap nut being the specified metal member.
